

Kirthiga Ravi

AI Engineer | Generative AI | LLMs | RAG | AI Agents | Python

PROFESSIONAL SUMMARY

AI Engineer focused on building practical AI applications using Python, LLMs, RAG, AI agents, APIs, and cloud technologies. Experienced in FastAPI backend services, document processing, job intelligence, matching workflows, and browser-assisted automation.

TECHNICAL SKILLS

Languages: Python, SQL

AI / GenAI: LLMs, Generative AI, RAG, Embeddings, AI Agents, Multi-Agent Systems

Frameworks: FastAPI, LangGraph, Pydantic, Playwright

Databases: PostgreSQL, SQLite, Vector Databases

Cloud / AI: Microsoft Azure, Microsoft Foundry, Azure AI

Backend / Tools: REST APIs, Docker, Git, Pytest, Uvicorn

PROJECTS

AI Job Application Agent — Python, FastAPI, LLMs, Playwright, SQLite

- Built resume upload, PDF/DOCX extraction, validation, LLM analysis, candidate profile generation, and database storage.
- Implemented job description intelligence for skills, experience, responsibilities, and structured job profiles.
- Developed candidate-to-job matching using skills, role, and experience with application recommendations.
- Implemented normalized job-source adapters and integrated Jooble as a real job source.
- Built safe application-source workflows with manual-review handling for login, CAPTCHA, and verification blockers.
- Added automated tests covering resume processing, job intelligence, matching, discovery, and application workflows.

Microsoft Azure AI / Generative AI

- Worked with Microsoft Foundry, model playgrounds, endpoints, SDKs, Responses API, Chat Completions API, File Search, Web Search, and function tools.
- Studied AI agent development, RAG concepts, responsible AI, and production-oriented AI solution design.

AI ENGINEERING CAPABILITIES

- Designs AI workflows from document ingestion through LLM processing, structured output, matching, and API delivery.
- Builds layered backend systems using Router → Validation → Service → Agent/Business Logic → Repository → Database.
- Uses testing, logging, structured schemas, and human-in-the-loop controls for automation workflows.

EDUCATION

Add your degree, university, and graduation year before using this resume for a real application.

CAREER INTEREST

Looking for an AI Engineer role focused on Generative AI, LLM applications, RAG, AI agents, Python backend development, APIs, and cloud-based AI systems.
